Applicant's arguments filed 2-25-05 have been fully considered but they are not persuasive.

Rejections over WO-'058 and U.S.-'665 are withdrawn in light of applicants' amendments, and demonstration of a criticality associated with preference for alkali metal salts and their amount in the combinations as claimed is sufficient to overcome a position of obviousness based on these references. Rejections over WO-'668 and US-'927 are withdrawn in light of applicants' amendments and lack of sufficient teaching of now claimed systems and the required polyester polyol component. Rejections over Hickey et al.'779 and '022 are withdrawn in light of applicants' amendments and sufficient demonstration of criticality associated with the combinations as claimed, including the amounts of alkali metal salt catalyst in combination with carboxylic acid, to overcome any position of obviousness based upon these references.

The following rejection is maintained:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-19, 22-24, 26 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Bodner et al. (5,143,945)

Bodnar et al. discloses preparations of polyisocyanurate based foams prepared by reacting isocyanates and isocyanate reactive materials, including polyester polyols in elevated amounts as claimed, at isocyanate indexes as claimed in the presence of blowing agents reading on those claimed, alkali metal salt trimerization catalysts in amounts as claimed, and functionalized and non-functionalized carboxylic acids, wherein the disclosed preparations read on the methods and products of applicants' claims (see examples, as well as, the entire document).

The pKa in water values are values associated with the selection of carboxylic acid and are held to be inherent features of the teachings of Bodner et al.

Applicants' arguments have been considered, but rejection is maintained for the reasons restated above. Bodner et al.'s teaching is sufficient in its teaching of water and fluoroalkane blowing agents to a degree that anticipation is sufficiently maintained to be proper (see again, the examples, column 3 lines 42-49 and 55, column 4 lines 66 et seq., and column 5 lines 1-22, as well as, the entire document).

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
